

Summary

Software Engineer with over seven years of experience designing and scaling cloud-based systems. Skilled in building resilient microservices and refactoring complex legacy code to improve performance, reliability, and maintainability. Experienced in delivering features to production through continuous deployment practices and collaborating with cross-functional teams to deliver solutions that meet both technical and business goals.

Technologies and Languages

- **Languages:** Javascript/Typescript, Java, Python, C++, GO, Kotlin, PHP
- **Tools & Platforms:** AWS, Docker, Kubernetes, Redis, Azure, ActiveMQ, GraphQL
- **Frameworks & Libraries:** Spring Boot, React.js, Node.js, Nest.js, Redux, Jest
- **Practices & Standards:** CI/CD, REST APIs, Pub/Sub Messaging, XML/XSD, Distributed Systems

Work Experience

Staff Software Engineer	<i>Ritchie Bros Auctioneer</i>	Jan 2023 – Mar 2025
• Contributed to AWS-based microservices for real-time bidding, improving system resilience and scaling to 8,000+ TPS with 99.99% uptime. • Led effort to refactor and modularization of legacy backend systems powering simulcast(in-person + online) auctions, improving maintainability and system clarity within a distributed architecture. • Implemented a virtual waiting room mechanism to handle traffic surges during peak login periods, using rate-limiting, queuing, and request deferral strategies to preserve backend stability and ensure fairness based on arrival order • Collaborated cross-functionally with product and legal to adapt platform logic and data flow for GDPR compliance, refactoring core data handling pipelines to meet regulatory requirements while maintaining system integrity and availability. • Actively identified friction points in developer workflows and led tooling and process improvements that enhanced team productivity.		
Senior Software Engineer	<i>Xcira</i>	Feb 2022 – Jan 2023
• Led and mentored junior devs; conducted 1:1s and performance reviews. • Designed and shipped full-stack features using React and Spring Boot for mission-critical operations, including a virtual waiting room system that I designed to throttle login surges by queuing requests and releasing users based on arrival order, mitigating traffic spikes and ensuring reliable access under heavy concurrency. • Played a key role in identifying and scheduling tech debt-removal initiatives alongside feature work, earning a reputation as a pragmatic technical leader. • Boosted deployment throughput by 40% via CI/CD automation and DevOps improvements. • Worked with distributed messaging via ActiveMQ to coordinate event-based auction workflows at scale.		
Software Engineer	<i>Xcira</i>	Sept 2018 – Feb 2022
• Implemented feature enhancements and updates to mission-critical back-end applications leveraging Java and PHP. • Developed customer facing features and components using widget based javascript. • Delivered and maintained core backend modules in Java and PHP, improving auction stability and client integrations.		
Backend Web Developer	<i>It's Pixel Perfect</i>	Jan 2017 – April 2018
• Created a chatbot-powered Progressive web app using Node.js and NLP; reached 2,000+ users in the first month.		

Projects

Lead Software Engineer	<i>Kee Farms Foundation</i>	March 2023 – Present
EcoIndex – Open Biodiversity Data Infrastructure		

- Leading development of EcolIndex, a biodiversity data infrastructure project aimed at assessing ecosystem damage and informing environmental policy.
- Designed and implemented a modular, containerized Java/Kotlin backend for ingesting, transforming, and aggregating global occurrence and ecosystem service data.
- Integrated external data providers (such as GBIF, iNaturalist, and OBIS) and normalized diverse biodiversity datasets through a unified querying framework.
- Built RESTful APIs and CLI tools to support research use cases, machine learning pipelines, and public transparency.

Volunteer Experience

Teaching Assistant

Launch Code

March 2018 – Dec 2018

- Taught object-oriented programming in Java, C++, Python, and JavaScript to a group of students.

Education and Certifications

- **University of the West Indies (2014–2016) — Computer Science focus**

Sep 2014–May 2016
